

# ■ Autonomous Coding Agent

How to use "codeagent" from anywhere on your system

## ① ONE-TIME SETUP (done only once)

### Step 1: Clone / Prepare Project

```
git clone <repo-url>  
cd Coding_Agent
```

### Step 2: Create Virtual Env

```
python -m venv venv  
venv\Scripts\activate
```

### Step 3: Install as Global Tool

```
pip install -e .  
(run with global pip too)
```

### Step 4: Add Your API Key (Global Config)

```
mkdir %USERPROFILE%\coding_agent  
notepad %USERPROFILE%\coding_agent\env  
OPENAI_API_KEY=your_key_here | OPENAI_MODEL=gpt-4o
```

## ② USE IT ANYWHERE (every time after setup)

### 1. Open Any Project Folder

```
cd D:\Path\To\Any\Project
```

### 2. Run The Command

```
codeagent
```

### 3. Chat Naturally

```
"create a login page"  
"list files here"
```

### ■ Key Idea:

Setup happens once. After that, the current terminal folder becomes the agent's working directory — so "codeagent" always works on whatever project you're in.
